SUMMARY

Software and data engineer with 2+ years across cloud and distributed systems, data pipelines, applied AI/ML, and analytics. Built observability and ETL pipelines on Azure at Microsoft, and agentic LLM, deep learning, and BI projects. MS CS candidate at NC State, **graduating May 2027**.

EDUCATION

North Carolina State University — MS Computer Science, Data Science Track (GPA: 4.00/4.00) *2025 – May 2027*
RV College of Engineering — B.E. Information Science (GPA: 9.70/10.0) *2020 – 2024*

SKILLS

Software & Cloud: Python, C, C++, C#, SQL, KQL, JavaScript, Kubernetes, Azure (Data Factory, Cosmos DB, Data Explorer, ML), AWS (S3, Lambda, Glue, Athena, EMR), Django, CI/CD, Git
Data Engineering & Analytics: ETL/ELT Pipelines, Data Modeling, Data Quality & Reconciliation, Telemetry & Observability, Pandas, NumPy, MySQL, Power BI (DAX), Excel
AI/ML: TensorFlow, NLP, SBERT, Prompt Engineering, Ollama (LLMs), Agentic AI, Statistical Modeling, Model Evaluation

WORK EXPERIENCE

Agentic AI Intern, Tavant Technologies *Jun 2026 – Jul 2026*
- Built an agentic travel-planning chatbot in Python with Ollama that reasons over Booking.com data; designed multi-step prompt workflows and output validation for grounded itineraries.
- Deployed the LLM as a cloud-hosted service on **Azure ML**.

Project Manager, Projects Committee, ACM at NC State *Sep 2026 – Present*
- Lead a 6-member team (3 backend, 2 frontend, 1 DevOps/QA) building **Pack Referrals**, a verified NC State alumni referral network, on a 7-week build; own roadmap and task delegation.
- Drove design of a Django REST + React stack with JWT auth, a 7-model schema, and a connection-request state machine; CI/CD via GitHub Actions.

Software Engineer, Microsoft India (R&D), Hyderabad *Jul 2024 – Jul 2025*
- Owned logs and metrics pipelines for Kubernetes-based systems on the Azure DevDiv observability team, supporting 4 enterprise monitoring customers (Datadog, Dynatrace, New Relic, Elastic).
- Engineered large-scale ETL migration from Cosmos MongoDB API to Cosmos DB Core API using Azure Data Factory, KQL, C#, and .NET; resolved data discrepancies at enterprise scale.
- Automated manual workflows and improved pipeline reliability and performance.

AIML Intern, NividApps Technology Solutions, Bangalore *Feb 2024 – Jun 2024*
- Built an ML Vendor Recommendation System for MSME procurement, plus a serverless AWS Athena/S3 pipeline (partitioned Parquet) that cut query cost ~90% and scan time ~80% on 10M+ rows.

Software Engineer Intern, Microsoft India (R&D), Hyderabad *May 2023 – Jun 2023*
- Built an Azure Data Explorer (KQL) dashboard tracking 3 health signals and an Azure ML pipeline predicting internal order delivery dates.

Research Intern, Samsung Research Institute, Bangalore *Jan 2023 – Aug 2023*
- Ran big data analytics on game metadata (Python, t-SNE, SBERT) for bundle recommendations in a 3-person team; co-authored arXiv paper.

PROJECTS

TimeTable Automation (Django/SQL): Production scheduler used by 9 RVCE departments (~300–360 faculty); cut admin workload 60% (10 days to 4).

Bat-Eye Bioacoustics (NVIDIA-Sponsored, TensorFlow): 89.5% accuracy on 9-class bat species classification over a 4GB ultrasonic dataset.

State Employee P-Card Analytics (Power BI, DAX): Star-schema model of 196,806 transactions; per-category Z-scores flagged 2,789 anomalies (~1.4%).

Inventory Management System (MySQL/Python): BCNF/3NF schema with stored procedures, triggers, and role-based access control.

PUBLICATIONS & HONORS

Best Paper Award, IEEE CSITSS 2023; co-author, IEEE INCET 2024; arXiv:2412.17310 (2024). **Silver Medallist**, B.E. (2nd Rank, 2023).
Microsoft Certified: Azure Data Fundamentals & Azure Fundamentals. AWS Training (Jul 2026): Cloud Practitioner, EMR, Athena.
